

Tareq Bilal Abu Sharkh

.NET Software Engineer

Amman, Jordan | +962 78 601 9522 | tareqbilal44@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with professional experience shipping features on a large-scale production platform, and hands-on personal-project experience designing C# / ASP.NET Core backends with Clean Architecture, CQRS, and microservices patterns. University of Jordan Computer Science graduate with a solid grounding in OOP, SOLID principles, and RESTful API design, plus a proven ability to pick up new stacks quickly and ship reliable, tested code in Agile teams. Seeking a .NET Software Engineer role to apply this backend architecture mindset on a production codebase.

TECHNICAL SKILLS

.NET & Backend: C#, ASP.NET Core, Entity Framework Core, ADO.NET, LINQ, RESTful API Design, GraphQL, JWT Authentication, SignalR

Architecture & Design: Clean Architecture, Microservices, CQRS + Mediator Pattern, Repository & Unit of Work, SOLID Principles, Design Patterns

Databases: MS SQL Server, T-SQL, PostgreSQL

Tools & DevOps: Git, GitHub, GitHub Actions, Docker, Postman, Swagger

Testing: Jest, Unit & Integration Testing

Frontend (Supporting): React, Next.js, TypeScript, JavaScript, Tailwind CSS, Bootstrap

PROFESSIONAL EXPERIENCE

Full-Stack Engineer — Optimum Partners Global

August 2025 – Present

Full-time employee at Optimum Partners Global, outsourced as a contracted software engineer to Bloomberg Media

- Contributed to an enterprise-scale media platform as an outsourced engineer, collaborating with remote, international teams in an Agile environment across backend, frontend, and observability domains.
- Designed and consumed REST and GraphQL APIs, handling queries, mutations, and data-fetching patterns to keep frontend and backend service layers in sync within a large production codebase.
- Wrote and maintained Jest unit and integration tests for UI components and integration layers, enforcing reliability and catching regressions before release.
- Used New Relic and Humio Cloud to trace production issues and analyze structured logs, building practical experience monitoring and debugging backend services running at scale.

PROJECTS

Personal Projects (.NET Focus)

Fursa — Freelance Marketplace Mobile Application

Private Repository

- Built backend services in .NET Core following Clean Architecture, separating domain, application, and infrastructure layers for maintainability and testability.
- Implemented JWT-based authentication and authorization to secure API endpoints across freelancer and client roles.
- Integrated SignalR to deliver real-time notifications for project updates and messaging.
- Built the admin dashboard in Next.js, giving platform staff a responsive interface for managing freelancers, projects, and a course marketplace.

Mood — AI-Powered Journal Application

Live Demo

- Built a full-stack journaling app (Next.js 16, TypeScript, Drizzle ORM, Neon PostgreSQL) with real-time auto-saving, Google Gemini AI mood analysis, and Clerk authentication with fully isolated per-user data.

Professional Projects — Bloomberg Media

LiveBlog

- Built and maintained Next.js/TypeScript components for a live content-publishing feature integrated with GraphQL backend services, validated with Zod, and covered by Jest tests.

Saved Searches

- Built backend services in Node.js/Express with GraphQL, Redis caching, and a PostgreSQL data layer for a saved-search personalization feature; documented with Storybook.

EDUCATION

University of Jordan

October 2021 – October 2025

Bachelor's Degree in Computer Science
